## Top Educational Technology Trends in 2020-2021

COVID-19 has changed the way we teach and learn. These are the 10 latest educational technology trends you don't want to miss.

## 1. Educational Technology Trends in 2020-2021

Big Data, Machine Learning, and the Internet of Things (IoT) were the biggest educational technology trends of 2019. However, distance learning has become the one trend that rules them all. The COVID-19 pandemic has drastically changed the way we teach and learn. Students now have to get used to distance learning via digital platforms due to social distancing. Even though some schools are reopening, this trend may continue until 2021. The latest EdTech trends in 2020, and further into 2021 are being revolutionized with a strong focus on connectivity, versatility, and student-centered learning. Let's take a look at the latest top 10 trends in educational technology.

## 2. What Is Educational Technology and Why Should It Matter?

Many people can recognize that EdTech is devoting technology to promote education. It's true, but not sufficient. The Association for Educational Communications and Technology (AECT) has defined EdTech as "facilitating learning and improving performance by creating, using, and managing appropriate technological processes and resources." On the other hand, educators who actually use EdTech have a much simpler definition of the term. They say that it is a concept of transforming traditional book teaching and learning to digital form. For them, the main difference lies in the way knowledge is delivered (thanks to technology innovation) to make teaching more effective.

In short, EdTech is simply the is a process of integrating technology into education to build better teaching/learning experiences that result in higher learning outcomes.

For example, several hospitals are training their new nurses with online safety courses by using animation.

## 3. Why Should It Matter?

There are lots of reasons why educators shifted to EdTech, replacing the traditional paper-and-pen teaching method. Particularly, we list some common advantages of EdTech that you can easily see here: Innovative Teaching Methods

Technology is an innovation of humans, so when an educator can apply technology to teaching, it is also innovative. EdTech allows teachers to provide multimedia to address diverse learning styles, such as animation, live video, etc. Besides, EdTech enables teachers to create online courses where students can learn in their own space and at their own pace.

## 4. Improve Collaborative Teaching

Technology has made it possible for everyone to stay connected. Students and teachers connect, discuss, share their opinions, and act upon situations collaboratively.

For example, eLearning is an educational tool that features collaboration by enabling students to share and discuss. Instead of being in a classroom and listening to teachers speak for 30 minutes, eLearning students can join an online group/platform and learn together by interacting with their peers. In this case, teachers are more accessible and act as mentors to help students develop themselves. This collaborative learning approach has bridged the gap between teachers and students and also helps students strengthens their interpersonal skills.

## 5. Teaching and Learning Process

Firstly, EdTech benefits how teachers teach, both online and offline. Not always having to go to a specific class at a specific time, students can learn whenever and wherever. Secondly, EdTech changes the way students approach learning. EdTech makes learning more fun and exciting for students. When we feel engaged in learning, we learn better, remember better, and also apply knowledge better to real life. Lastly, technology makes education smarter, more effective, thus, satisfying learners' needs more. True educators bring valuable knowledge to learners, both in theory and in real life. But smart educators are those who can create teaching from what learners want to learn.

To sum up, **EdTech** doesn't mean teachers have to become IT experts. But it's true that teachers can do these fascinating things only with technology, and that's why we need **EdTech** in life.
